### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Kudou et al., 5,173,626.

Kudou et al., 5,173,626, discloses in Fig. 4 a latch circuit comprising:

6 inverters 26-31 connected in a loop;

a plurality of input terminals D, O, O, E, E, T, T and S respectively connected to different nodes which are the output nodes of multiplexers 23-25; wherein: at least one of data input D and enable inputs E and E being used for normal operation; at least another of test inputs T and T being used for test operation; and a plurality of output terminals connected to different output nodes at the outputs of inverters 27 and 31.

### ***Allowable Subject Matter***

3. Claims 5-11 are allowed.
4. The following is an examiner's statement of reasons for allowance:

The latch circuit connected as recited in claims 5-11 has not been found in the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2818

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

### ***Response to Arguments***

6. Applicant's arguments filed on 8/12/04 have been fully considered but they are not persuasive because of the following reasons:

All the objection to the drawings and the rejection of claim 8 under 35 USC 112, second paragraph, have been withdrawn in view of Applicant's amendment.

Regarding the rejection of claims 1-4 under 35 USC 102(b) as being anticipated by Kudou et al., 5,173,626:

Art Unit: 2818

Fig. 5 of Kudou et al., 5,173,626, does show a plurality of input terminals D, 0, 0, E, E, T, T and S, respectively, connected to different nodes which are the output nodes of multiplexers 23-25; wherein: at least one of data input D and enable inputs E and E being used for normal operation; at least another of test inputs T and T being used for test operation; and a plurality of output terminals connected to different output nodes at the outputs of inverters 27 and 31. Therefore, the rejection of claims 1-4 under 35 USC 102(b) as being anticipated by Kudou et al., 5,173,626, is still totally proper and is made FINAL.
